BACKGROUND. The major update of WHO-ICD-10 classification introduced in 2010 resulted in substantial changes for hemato-oncological diseases by introducing a new 3-digit (C86) and several new 4-digit codes and terms. For a substantial number of codes an unambiguous (1:1) conversion within ICD-10 seemed impossible. Furthermore the conversion programs provided by IARC (ICD-O-3 to ICD-10) could no longer be used for these diagnoses.

METHODS. Main purpose was to ensure the best possible automated conversion of ICD-10 codes to the updated version for all hemato-oncological cases diagnosed until 2010, by making use of the typically more specific ICD-O-3 information. Therefore, we developed a new conversion table from ICD-O-3 to ICD-10 for ICD-O-3 morphology codes 9590/3 to 9989/3. Additionally, conversions for the new ICD-O-3 codes introduced in 2011 were provided. For the first draft of the conversion table, we used a systematic approach using a hierarchical structure of criteria, mainly based on synonym terms given in both classifications and additional information from the WHO Classification of tumours of Haematopoetic and Lymphoid Tissues. This draft was circulated among coding specialists in the registries, and finally all ambiguities were discussed with a clinical oncologist, member of the Topical Advisory Group for Neoplasm for the WHO (SWK).

RESULTS. All conversions are given in table 2. When applied to the pooled data of German cancer registries (2006-2010), 18% of hemato-oncological cases ICD-10 codes changed on the 4-digit, and 6% on the 3-digit level. Changes between major diagnostic groups (1.3%) or between C- and D-codes (0.2%) were rare. Nearly half of the 3-digit changes originated from the conversion of 9699/3 (marginal zone-B-cell-lymphoma n.o.s.) to C83.0 or C88.4 (depending on localization) instead of C82.7.

DISCUSSION. For a number of ICD-O-3 codes, no 1:1 conversion to ICD-10 was possible, and while we supply a reasonable solution for automated conversion, more accurate ICD-10 codes could be found when going back to diagnostic/pathologic reports. Some diagnostic terms are only used either in ICD-10 or ICD-O-3, which made conversion difficult and sometimes required arbitrary decisions. For Myeloma, the conversion was done with respect to common practice in Germany where 'Plasmacytoma' is often used as the more generic term (instead of Myeloma).

CONCLUSIONS. Despite limited impact on the data, we suggest the use of our conversion table (ICD-O-3 to ICD-10) for hemato-oncological diseases in population based cancer registries, especially for analyzing time trends according to ICD-10. The complete conversion table in electronic form can be ordered from our website (comments and suggestions welcome). For the future (ICD-11), an improved coordination between ICD and ICD-O working groups regarding hemato-oncological diseases is highly desirable.

Table 1: Criteria used to derive ICD-O-3 to ICD-10 conversion (applied in hierarchical order from A. to H.)

A	Main title identical for both codes (applicable for 28 codes)
B	Main title for both codes are judged as synonym (40 codes)
C	Main title in ICD-O-3 is mentioned in the systematic directory of ICD-10 under this code (26 codes)
D	Synonym for the main title in ICD-O-3 is mentioned in the systematic directory of ICD-10 under this code (11 codes)
E	Main title in ICD-O-3 is used as a synonym or inclusive term under this code in the alphabetical directory of ICD-10 (7 codes)
F	Generic term in ICD-O-3 ICD-O-3 (widely) identical to main title ICD-10, lower level of differentiation in ICD-10 (35 codes)
G	Use of inclusive terms from both classifications (2 codes)
H	No equivalent terms in ICD-O-3/ICD-10. Conversion derived from WHO classification or expert decision (SK) (15 codes)
